Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-2, drawn to the electrical connections between parallel plate electrostatic electrodes, classified in class 310, subclass 309.
 - II. Claim 3, drawn to a frame for an electrostatic actuator with a foam support between the electrodes, classified in class 310, subclass 309.
 - III. Claim 4, drawn to a frame for an electrostatic actuator, classified in class 310, subclass 309.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Groups I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group I has separate utility such as an actuator without the foam support of Group II or the stacked frame of Group III; the invention Group II has separate utility such as an actuator without interplate connections of Group I or the stacked frame of Group III; and Group III has separate utility such as an actuator without interplate connections of Group I or without the foam support of Group II. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and the inventions have acquired a separate status in the art because of their recognized divergent subject matter, as evidenced by the interplate connection search of Group I is

not required for Group II or Group II; the foam cell of Group II, is not required for Group I or III; and the stacked frame of Group III is not required for Group I or Group II, therefore the restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. An examination of this application reveals that applicant is unfamiliar with patent prosecution procedure. While an inventor may prosecute the application, lack of skill in this field usually acts as a liability in affording the maximum protection for the invention disclosed. Applicant is advised to secure the services of a registered patent attorney or agent to prosecute the application, since the value of a patent is largely dependent upon skilled preparation and prosecution. The Office cannot aid in selecting an attorney or agent.

A listing of registered patent attorneys and agents is available on the USPTO Internet web site <http://www.uspto.gov> in the Site Index under "Attorney and Agent Roster." Applicants may also obtain a list of registered patent attorneys and agents located in their area by writing to the Mail Stop OED, Director of the U. S. Patent and Trademark Office, PO Box 1450, Alexandria, VA 22313-1450
